

WAREHOUSE SOLUTIONS

// FURNITURE WAREHOUSE

Across the parking lot from Wing of Eagles is an 18,000 sq. ft. Furniture Retail Store with no insulation of AC. The roof temperature radiates **177 degree** heat down that creates an oven on the sales floor compared to the 97 degree heat at the surface of the Wings ceiling. Customers can only handle **120 degree** heat for a short period while shopping and the workers are miserable. Even the vinyl chairs have a surface temperature of **125 degree**, I guess that would make it a “HOT” seat? The installation of Greenstar Panels will create a more comfortable environment for the customers as well as the sales and warehouse personnel. More comfort means more sales and less liability.

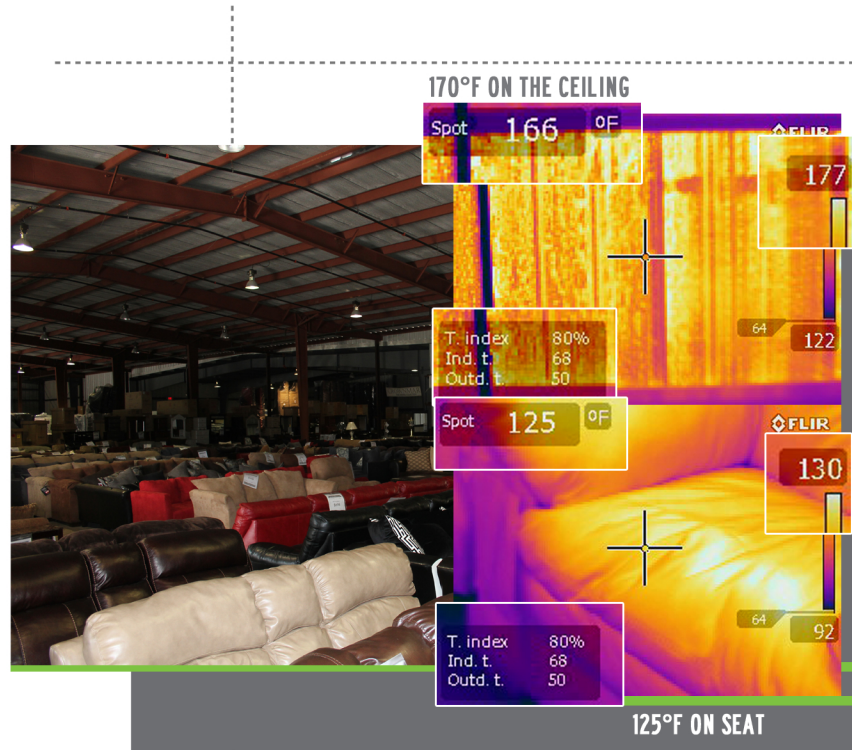

AMBIENT TEMPERATURE WHEN WAREHOUSE DATA WAS RECORDED

// WINGS OF EAGLES INTERNATIONAL

Wings Of Eagles International, Inc. is a Lakeland based ministry serving the disenfranchised population of the world. Our local outreach began in 1996 and has now expanded to two locations in Lakeland. In January 2012 we moved into a 30,000 sf metal warehouse facility. The primary usage is food distribution. We installed a 600' walk in freezer and a walk-in cooler. In March, we recognized the metal facility with no insulation was going to be too hot to efficiently store food and operate the walk-in's.

Greenstar Panels gave us our solution. By attaching their 16' Greenstar Panels to our existing metal ceiling framework, we were able to reduce the surface heat that penetrates the metal building by around 70 degrees. This reduction from **160 degrees to 89 degrees** in the middle of the summer heat not only protected our food, it helped our walk-in units run more efficiently, and made it demonstrably more comfortable for our employees.

Our employees, our equipment, and my energy bill all say a big “Thank You!”

Sincerely, Don Steiner, President
Wings of Eagles International, Inc.
